PROFILE

I'm a game programmer **specialized** in **gameplay** systems and s**oftware architecture** with nearly three years of **experience** working in **2D,3D and VR games**. I'm versed in **design patterns** and **object oriented programing,** allowing me to build **clean and robust code**, with a focus on **performance** and **optimization**.

I **enjoy working** in a **collaborative** and **iterative** way with the rest of the team to **deliver** the **best possible experience** for the player. With additional **expertise** in technical **art** and **game design** I can effectively **bridge** the gap **between designers, artist and programmers**. I'm always eager to learn and experiment new things.

GAMEPLAY PROGRAMMER - Stendhal Games *[2021-2024]* Unity

Arcanima: Mist of Oblivion - Hack and Slash Singleplayer ARPG

- Achieved a satisfaying combat and movement systems implementation, enjoyed by the majority of the players, based on a data driven design.
- Designed a character architecture that allowed to decouple input and behaviour. Achieved direct control of enemy and player characters by commands for iteration ease without the need of building an AI.
- Improved the performance of the project by profiling and applying optimization techniques such as object pooling, time slicing and level streaming.
- Achieved a deep knowledge of Unity animation system by implementing all character movement and combat animations in a responsive and effective way.
- Succesfully managed the whole game flow: game over, load and save game and load/unload scenes in real time avoiding loading screens.
- Improved the ease of work for artist and designers by creating tools and qol features.
- Heavily involved in the combat design for all the characters; their coreography, attacks and behaviour.

★ Achieved 96% positive reviews on Steam

VR PROGRAMMER - Prexenz VR Studio *[2020-2022]* UNREAL ENGINE

Maltravieso Cave - VR Paleolithic Cave Recreation

- Achieved an usable and inclusive experience by implemented an assisted "on rails" teleportation system.
- Succesfully implemented the ability to hand printing in any wall of the cave.
- Improved the project performance by implementing a custom LOD system attached to player teleportation.

Pink Goo - VR Asymetric couch game

- Implemented several mechanics and power-ups in a net coded environment.
- Effectively performed additional gameplay polish and game design balance.

NeoSkills - Soft Skills Multiplayer VR Training System

- Implemented several key gameplay elements in a multiplayer environment
- Succesfully implemented various tactil VR graphics interfaces in a usable and intuitive way.
- Effectively built customization tools for artists' ease.
- Succesfully implemented an onboarding environment for players not used to VR.

EDUCATION

Professional Game Development in C++ and Unreal Engine Tom Looman's Course
(Remote)
[2024]

Double Degree in Videogame Design and Development + Computer Engineering
Rey Juan Carlos University
(Madrid, Spain)
[2016-2022]

TECHNICAL SKILLS

GAME ENGINES

Unreal Engine Godot
Unity

PROGRAMMING LANGUAGES

C/C++ Unreal Blueprints
C# Java

COLLABORATIVE SOFTWARE

Git Microsoft Office
Slack HacknPlan
Jira Trello

SOFT SKILLS

Teamplayer Accepting feedback
Resilient Active Listener
Communicative

LANGUAGES

Spanish - Native
English - B2 First
Japanese - JLPT N5
